

# Custom Intubation Enclosure

Helps protect doctors and nurses from COVID-19 and other infectious diseases.

## Specifications:

### Material

3/16" Acrylic or Polycarbonate  
(based on material availability)

### Dimensions

20" W x 20" H x 16" D  
4" diameter access holes

**Cleaning Instructions:** The enclosure should be thoroughly cleaned and disinfected after each use. Acrylic and polycarbonate can be cleaned with Bleach – household grade; Isopropyl Alcohol, diluted with water to 30% strength; or Hydrogen Peroxide – pharmacy grade. This cleaning will degrade the product and after a limited number of uses the product will have to be cleaned and disinfected and disposed of as medical waste, and replaced.

**Inspections:** The Custom Intubation Enclosure must be closely inspected at regular intervals, and before and after each use for wear, cracks, broken seals, and its continued ability to perform its stated function. If your enclosure does not pass the above inspection, remove it from service and destroy it.

**WARNING** The Custom Intubation Enclosure provides a temporary barrier between medical personnel and patient but is not rated to stop the spread of infectious disease and will not prevent infectious disease, virus, or germs from exiting the enclosure. It is the sole responsibility of purchaser and medical staff to disinfect between uses and to minimize the spread of any infectious disease when using the equipment.

\* Original design by Dr. Lai Hsien-Yung

**Innova-Safety** is a leading niche manufacturer of highly engineered, professional safety and rescue equipment used in high-height anchorage and fall arrest applications. Its fall protection trolleys guard tens of thousands of workers every day from falls.

With our expertise in manufacturing safety equipment, we are ready and committed to help protect those medical professionals serving on the front lines by providing a range of custom safety product solutions.

**The Custom Intubation Enclosure** provides a temporary barrier between doctor and patient, and helps protect the doctor during the intubation process from the contraction of COVID-19 and other infectious diseases.

Our products are proudly designed, engineered and manufactured in the USA.
